## NCERT Solutions for Class 9 Maths Chapter 11 _ Constructions

## Exercise 11.1

Page: 191

## 1. Construct an angle of $90^{\circ}$ at the initial point of a given ray and justify the construction.

## Construction Procedure:

To construct an angle $90^{\circ}$, follow the given steps:

1. Draw a ray OA
2. Take O as a centre with any radius, draw an arc DCB is that cuts OA at B .
3. With B as a centre with the same radius, mark a point C on the $\operatorname{arc} \mathrm{DCB}$.
4. With C as a centre and the same radius, mark a point D on the arc DCB.
5. Take C and D as centre, draw two arcs which intersect each other with the same radius at P .
6. Finally, the ray OP is joined which makes an angle $90^{\circ}$ with OP is formed.

## Justification

To prove $\angle \mathrm{POA}=90^{\circ}$
In order to prove this draw a dotted line from the point O to C and O to D and the angles formed are:

From the construction, it is observed that
$\mathrm{OB}=\mathrm{BC}=\mathrm{OC}$
Therefore $O B C$ is an equilateral triangle
So that, $\angle \mathrm{BOC}=60^{\circ}$.
Similarly,
$\mathrm{OD}=\mathrm{DC}=\mathrm{OC}$
Therefore DOC is an equilateral triangle
So that, $\angle \mathrm{DOC}=60^{\circ}$.
From SSS triangle congruence rule
$\triangle \mathrm{OBC} \cong 0 C D$

## NCERT Solutions for Class 9 Maths Chapter 11 _ Constructions

$\angle \mathrm{BOC}=\angle \mathrm{DOC}$
Therefore, $\angle \mathrm{COP}=1 / 2 \angle \mathrm{DOC}=1 / 2\left(60^{\circ}\right) . \angle$
$\mathrm{COP}=30^{\circ}$

To find the $\angle P O A=90^{\circ}$ :
$\angle \mathrm{POA}=\angle \mathrm{BOC}+\angle \mathrm{COP}$
$\angle \mathrm{POA}=60^{\circ}+30^{\circ}$
$\angle \mathrm{POA}=90^{\circ}$
Hence, justified.

## 2. Construct an angle of $45^{\circ}$ at the initial point of a given ray and justify the construction.

## Construction Procedure:

1. Draw a ray OA
2. Take O as a centre with any radius, draw an arc DCB is that cuts OA at B .
3. With B as a centre with the same radius, mark a point C on the $\operatorname{arc} \mathrm{DCB}$.
4. With C as a centre and the same radius, mark a point D on the arc DCB .
5. Take C and D as centre, draw two arcs which intersect each other with the same radius at P .
6. Finally, the ray OP is joined which makes an angle $90^{\circ}$ with OP is formed.
7. Take B and Q as centre draw the perpendicular bisector which intersects at the point R
8. Draw a line that joins the point O and R
9. So, the angle formed $\angle \mathrm{ROA}=45^{\circ}$

## Justification

From the construction,
$\angle \mathrm{POA}=90^{\circ}$
From the perpendicular bisector from the point B and Q , which divides the $\angle \mathrm{POA}$ into two halves. So it becomes $\angle \mathrm{ROA}=1 / 2 \angle \mathrm{POA}$
$\angle \mathrm{ROA}=1 / 2 \times 90^{\circ}=45^{\circ}$
Hence, justified

## 3. Construct the angles of the following measurements:

(i) $30^{\circ}$
(ii) $22 \frac{1^{\circ}}{2}$
(iii) $15^{\circ}$

Solution:
(i) $\mathbf{3 0}^{\circ}$

Construction Procedure:

1. Draw a ray OA
2. Take O as a centre with any radius, draw an arc BC which cuts OA at B .
3. With $B$ and $C$ as centres, draw two arcs which intersect each other at the point $E$ and the perpendicular bisector is drawn.
4. Thus, $\angle \mathrm{EOA}$ is the required angle making $30^{\circ}$ with OA .

(ii) $2^{\frac{1}{2}}$

## Construction Procedure:

1. Draw an angle $\angle \mathrm{POA}=90^{\circ}$
2. Take O as a centre with any radius, draw an arc BC which cuts OA at B and OP at Q
3. Now, draw the bisector from the point $B$ and $Q$ where it intersect at the point $R$ such that it makes an angle $\angle R O A=45^{\circ}$.
4. Again, $\angle \mathrm{ROA}$ is bisected such that $\angle \mathrm{TOA}$ is formed which makes an angle of $22.5^{\circ}$ with OA

## NCERT Solutions for Class 9 Maths Chapter 11 _ Constructions

(iii) $15^{\circ}$

## Construction Procedure:

1. An angle $\angle \mathrm{DOA}=60^{\circ}$ is drawn.
2. Take O as centre with any radius, draw an arc BC which cuts OA at B and OD at C
3. Now, draw the bisector from the point $B$ and $C$ where it intersect at the point $E$ such that it makes an angle $\angle \mathrm{EOA}=30^{\circ}$.
4. Again, $\angle \mathrm{EOA}$ is bisected such that $\angle \mathrm{FOA}$ is formed which makes an angle of $15^{\circ}$ with OA .
5. Thus, $\angle \mathrm{FOA}$ is the required angle making $15^{\circ}$ with OA .

6. Construct the following angles and verify by measuring them by a protractor:
(i) $75^{\circ}$
(ii) $105^{\circ}$
(iii) $135^{\circ}$

Solution:
(i) $75^{\circ}$

Construction Procedure:

1. A ray OA is drawn.
2. With $O$ as centre draw an arc of any radius and intersect at the point $B$ on the ray OA.
3. With B as centre draw an arc C and C as centre draw an $\operatorname{arc} \mathrm{D}$.
4. With D and C as centre draw an arc, that intersect at the point P .
5. Join the points O and P
6. The point that arc intersect the ray OP is taken as Q .
7. With Q and C as centre draw an arc, that intersect at the point R .
8. Join the points O and R
9. Thus, $\angle \mathrm{AOE}$ is the required angle making $75^{\circ}$ with OA .

(ii) $105^{\circ}$

Construction Procedure:

1. A ray OA is drawn.
2. With $O$ as centre draw an arc of any radius and intersect at the point $B$ on the ray OA.
3. With B as centre draw an $\operatorname{arc} \mathrm{C}$ and C as centre draw an $\operatorname{arc} \mathrm{D}$.
4. With D and C as centre draw an arc, that intersect at the point P .
5. Join the points O and P
6. The point that arc intersect the ray OP is taken as Q .
7. With Q and Q as centre draw an arc, that intersect at the point R .
8. Join the points O and R
9. Thus, $\angle \mathrm{AOR}$ is the required angle making $105^{\circ}$ with OA .

## (iii) $135^{\circ}$

## Construction Procedure:

1. Draw a line AOA'
2. Draw an arc of any radius that cuts the line AOA' at the point B and B' 3 . With B as centre, draw an arc of same radius at the point C .
3. With C as centre, draw an arc of same radius at the point D
4. With D and C as centre, draw an arc that intersect at the point O
5. Join OP

## NCERT Solutions for Class 9 Maths Chapter 11 _ Constructions

7. The point that arc intersect the ray OP is taken as Q and it forms an angle $90^{\circ} 8$. With $\mathrm{B}^{\prime}$ and Q as centre, draw an arc that intersects at the point $R$
8. Thus, $\angle$ AOR is the required angle making $135^{\circ}$ with OA .

9. Construct an equilate ral triangle, given its side and justify the construction.

## Construction Procedure:

1. Let draw a line segment $A B=4 \mathrm{~cm}$.
2. With $A$ and $B$ as centres, draw two arcs on the line segment $A B$ and note the point as $D$ and $E$.
3. With D and E as centres, draw the arcs that cuts the previous arc respectively that forms an angle of $60^{\circ}$ each.
4. Now, draw the lines from A and B that are extended to meet each other at the point C.
5. Therefore, ABC is the required triangle.

## Justification:

From construction, it is observed that
$\mathrm{AB}=4 \mathrm{~cm}, \angle \mathrm{~A}=60^{\circ}$ and $\angle \mathrm{B}=60^{\circ}$
We know that, the sum of the interior angles of a triangle is equal to $180^{\circ}$
$\angle \mathrm{A}+\angle \mathrm{B}+\angle \mathrm{C}=180^{\circ}$
SuBstitute the values

## NCERT Solutions for Class 9 Maths Chapter 11 _ Constructions

$\Rightarrow 60^{\circ}+60^{\circ}+\angle \mathrm{C}=180^{\circ}$
$\Rightarrow 120^{\circ}+\angle \mathrm{C}=180^{\circ}$
$\Rightarrow \angle \mathrm{C}=60^{\circ}$
While measuring the sides, we get
$\mathrm{BC}=\mathrm{CA}=4 \mathrm{~cm}$ (Sides opposite to equal angles are equal)
$\mathrm{AB}=\mathrm{BC}=\mathrm{CA}=4 \mathrm{~cm}$
$\angle \mathrm{A}=\angle \mathrm{B}=\angle \mathrm{C}=60^{\circ}$ Hence,
justified.

## Exercise 11.2

1. Construct a triangle $A B C$ in which $B C=7 \mathrm{~cm}, \angle B=75^{\circ}$ and $A B+A C=13 \mathbf{c m}$.

Construction Procedure:
The steps to draw the triangle of given measurement is as follows:

1. Draw a line segment of base $\mathrm{BC}=7 \mathrm{~cm}$
2. Measure and draw $\angle \mathrm{B}=75^{\circ}$ and draw the ray BX
3. Take a compass and measure $\mathrm{AB}+\mathrm{AC}=13 \mathrm{~cm}$.
4. With B as centre and draw an arc at the point be D 5. Join DC
5. Now draw the perpendicular bisector of the line BD and the intersection point is taken as A. 7 . Now join AC
6. Therefore, ABC is the required triangle.

7. Construct a triangle ABC in which $\mathrm{BC}=8 \mathrm{~cm}, \angle B=45^{\circ}$ and $\mathrm{AB}-\mathrm{AC}=3.5 \mathrm{~cm}$.

Construction Procedure:
The steps to draw the triangle of given measurement is as follows:

1. Draw a line segment of base $B C=8 \mathrm{~cm} 2$. Measure and draw $\angle B=45^{\circ}$ and draw the ray $B X$

## NCERT Solutions for Class 9 Maths Chapter 11 _ Constructions

3. Take a compass and measure $\mathrm{AB}-\mathrm{AC}=3.5 \mathrm{~cm}$.
4. With B as centre and draw an arc at the point be D on the ray BX 5. Join DC
5. Now draw the perpendicular bisector of the line CD and the intersection point is taken as A. 7 . Now join AC
6. Therefore, ABC is the required triangle.

7. Construct a triangle $P Q R$ in which $Q R=6 \mathrm{~cm}, \angle Q=60^{\circ}$ and $P R-P Q=2 \mathrm{~cm}$.

Construction Procedure:
The steps to draw the triangle of given measurement is as follows:

1. Draw a line segment of base $\mathrm{QR}=6 \mathrm{~cm} 2$. Measure and draw $\angle \mathrm{Q}=$ $60^{\circ}$ and let the ray be QX
2. Take a compass and measure $\mathrm{PR}-\mathrm{PQ}=2 \mathrm{~cm}$.
3. Since $\mathrm{PR}-\mathrm{PQ}$ is negative, QD will below the line QR .
4. With Q as centre and draw an arc at the point be D on the ray QX 6 . Join DR
5. Now draw the perpendicular bisector of the line DR and the intersection point is taken as P .
6. Now join PR
7. Therefore, PQR is the required triangle.

## NCERT Solutions for Class 9 Maths Chapter 11 _ Constructions

## 4. Construct a triangle $X Y Z$ in which $\angle Y=30^{\circ}, \angle Z=90^{\circ}$ and $X Y+Y Z+Z X=11 \mathrm{~cm}$.

## Construction Procedure:

The steps to draw the triangle of given measurement is as follows:

1. Draw a line segment AB which is equal to $\mathrm{XY}+\mathrm{YZ}+\mathrm{ZX}=11 \mathrm{~cm}$.
2. Make an angle $\angle \mathrm{Y}=30^{\circ}$ from the point A and the angle be $\angle \mathrm{LAB} 3$. Make an angle $\angle \mathrm{Z}=90^{\circ}$ from the point B and the angle be $\angle \mathrm{MAB}$
3. Bisect $\angle \mathrm{LAB}$ and $\angle \mathrm{MAB}$ at the point X .
4. Now take the perpendicular bisector of the line XA and XB and the intersection point be Y and Z respectively.
5. Join XY and XZ
6. Therefore, XYZ is the required triangle

7. Construct a right triangle whose base is 12 cm and sum of its hypotenuse and other side is 18 cm .

## Construction Procedure:

The steps to draw the triangle of given measurement is as follows:

1. Draw a line segment of base $\mathrm{BC}=12 \mathrm{~cm}$
2. Measure and draw $\angle \mathrm{B}=90^{\circ}$ and draw the ray BX 3 . Take a compass
and measure $\mathrm{AB}+\mathrm{AC}=18 \mathrm{~cm}$.
3. With B as centre and draw an arc at the point be D on the ray BX 5 .

Join DC
6. Now draw the perpendicular bisector of the line CD and the intersection point is taken as A. 7. Now join AC
8. Therefore, ABC is the required triangle.
