## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

## Exercise 14.1

1. A survey was conducted by a group of students as a part of their environment awareness program, in which they collected the following data regarding the number of plants in 20 houses in a locality. Find the mean number of plants per house.

| Number of Plants | $0-2$ | $2-4$ | $4-6$ | $6-8$ | $8-10$ | $10-12$ | $12-14$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of Houses | 1 | 2 | 1 | 5 | 6 | 2 | 3 |

Which method did you use for finding the mean, and why?
Solution:
In order to find the mean value, we will use direct method because the numerical value of $f_{i}$ and $x_{i}$ are small. Find the midpoint of the given interval using the formula.
Midpoint $\left(\mathrm{x}_{\mathrm{i}}\right)=($ upper limit + lower limit $) / 2$

| No. of plants <br> (Class interval) | No. of houses Frequency <br> $\left(\mathrm{f}_{\mathrm{i}}\right)$ | Mid-point $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $\mathrm{f}_{\mathrm{i} \mathrm{X}_{\mathrm{i}}}$ |
| :---: | :---: | :---: | :---: |
| $0-2$ | 1 | 1 | 1 |
| $2-4$ | 2 | 3 | 6 |
| $4-6$ | 1 | 5 | 5 |
| $6-8$ | 5 | 7 | 35 |
| $8-10$ | 6 | 9 | 54 |
| $10-12$ | 2 | 11 | 22 |
| $12-14$ | 3 | 13 | 39 |
|  | Sum $\mathrm{f}_{\mathrm{i}}=20$ |  | Sum $_{\mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}}=162}$ |

The formula to find the mean is:
Mean $=\overline{\mathrm{x}}=\sum \mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}$
$=162 / 20$
$=8.1$
Therefore, the mean number of plants per house is 8.1

## 2. Consider the following distribution of daily wages of 50 workers of a factory.

| Daily wages (in Rs.) | $100-120$ | $120-$ <br> 140 | $140-$ <br> 160 | $160-$ <br> 180 | $180-$ <br> 200 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of workers | 12 | 14 | 8 | 6 | 10 |

Find the me an daily wages of the workers of the factory by using an appropriate method.

## Solution:

Find the midpoint of the given interval using the formula.
Midpoint $\left(\mathrm{x}_{\mathrm{i}}\right)=($ upper limit + lower limit $) / 2$
In this case, the value of mid-point ( $\mathrm{x}_{\mathrm{i}}$ ) is very large, so let us assume the mean value, $\mathrm{A}=150$ and class interval is $\mathrm{h}=20$.
So, $\mathrm{u}_{\mathrm{i}}=\left(\mathrm{x}_{\mathrm{i}}-\mathrm{A}\right) / \mathrm{h}=\mathrm{u}_{\mathrm{i}}=\left(\mathrm{x}_{\mathrm{i}}-150\right) / 20$ Substitute
and find the values as follows:

| Daily wages <br> (Class interval) $)$ | Number of workers <br> frequency $\left(\mathrm{f}_{\mathrm{i}}\right)$ | Mid-point $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $\mathrm{u}_{\mathrm{i}}=\left(\mathrm{x}_{\mathrm{i}}-150\right) / 20$ | $\mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: | :---: |
| $100-120$ | 12 | 110 | -2 | -24 |
| $120-140$ | 14 | 130 | -1 | -14 |
| $140-160$ | 8 | 150 | 0 | 0 |
| $160-180$ | 6 | 170 | 1 | 6 |
| $180-200$ | 10 | 190 | 2 | 20 |
| Total | Sum $\mathrm{f}_{\mathrm{i}}=50$ |  |  | Sum $_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}=-12$ |

So, the formula to find out the mean is:
Mean $=\overline{\mathrm{x}}=\mathrm{A}+\mathrm{h} \sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}=150+(20 \times-12 / 50)=150-4.8=145.20$ Thus, mean daily wage of the workers $=$ Rs. 145.20
3. The following distribution shows the daily pocket allowance of children of a locality. The mean pocket allowance is Rs $\mathbf{1 8}$. Find the missing frequency $f$.

| Daily Pocket <br> Allowance(in c) | $11-13$ | $13-15$ | $15-17$ | $17-19$ | $19-21$ | $21-23$ | $23-35$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of <br> children | 7 | 6 | 9 | 13 | f | 5 | 4 |

Solution:
To find out the missing frequency, use the mean formula.
Here, the value of mid-point $\left(\mathrm{x}_{\mathrm{i}}\right)$ mean $\overline{\mathrm{x}}=18$

| Class interval | Number of children $\left(\mathrm{f}_{\mathrm{i}}\right)$ | Mid-point $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :--- | :--- | :--- | :--- |
| $11-13$ | 7 | 12 | 84 |
| $13-15$ | 6 | 14 | 84 |
| $15-17$ | 9 | 16 | 144 |
| $17-19$ | 13 | $18=\mathrm{A}$ | 234 |
| $19-21$ | f | 20 | 20 f |
| $21-23$ | 5 | 22 | 110 |
| $23-25$ | 4 | 24 | 96 |
| Total | $\mathrm{f}_{\mathrm{i}}=44+\mathrm{f}$ |  | Sum $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=752+20 \mathrm{f}$ |

The mean formula is
Mean $=\overline{\mathrm{x}}=\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}=(752+20 \mathrm{f}) /(44+\mathrm{f})$
Now substitute the values and equate to find the missing frequency (f)
$\Rightarrow 18=(752+20 \mathrm{f}) /(44+\mathrm{f})$
$\Rightarrow 18(44+\mathrm{f})=(752+20 \mathrm{f})$
$\Rightarrow 792+18 \mathrm{f}=752+20 \mathrm{f}$
$\Rightarrow 792+18 \mathrm{f}=752+20 \mathrm{f}$

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

$\Rightarrow 792-752=20 f-18 f$
$\Rightarrow 40=2 \mathrm{f}$
$\Rightarrow \mathrm{f}=20$
So, the missing frequency, $\mathrm{f}=20$.
4. Thirty women were examined in a hospital by a doctor and the number of heart beats per minute were recorded and summarized as follows. Find the mean heart beats per minute for these women, choosing a suitable method.

| Number of <br> heart beats <br> per minute | $65-68$ | $68-71$ | $71-74$ | $74-77$ | $77-80$ | $80-83$ | $83-86$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of <br> women | 2 | 4 | 3 | 8 | 7 | 4 | 2 |

Solution:
From the given data, let us assume the mean as $\mathrm{A}=75.5 \mathrm{x}_{\mathrm{i}}$
$=($ Upper limit + Lower limit $) / 2$
Class size (h) $=3$
Now, find the $u_{i}$ and $f_{i} u_{i}$ as follows:

| Class Interval | Number of women ( $\mathrm{f}_{\mathrm{i}}$ | $\sum_{\left(\mathrm{x}_{\mathrm{i}}\right)}^{\text {Mid-point }}$ | $\mathrm{u}_{\mathrm{i}}=\left(\mathrm{x}_{\mathrm{i}}-75.5\right) / \mathrm{h}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: | :---: |
| 65-68 | 2 | 66.5 | -3 | -6 |
| 68-71 | 4 | 69.5 | -2 | -8 |
| 71-74 | 3 | 72.5 | -1 | -3 |
| 74-77 | 8 | 75.5 | 0 | 0 |
| 77-80 | 7 | 78.5 | 1 | 7 |
| 80-83 | 4 | 81.5 | 3 | 8 |
| 83-86 | 2 | 84.5 | 3 | 6 |
|  | Sum $\mathrm{f}_{\mathrm{i}}=30$ |  |  | Sum $\mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}=4$ |

Mean $=\overline{\mathrm{x}}=\mathrm{A}+\mathrm{h} \sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}$
$=75.5+3 \times(4 / 30)$
$75.5+4 / 10$
$=75.5+0.4$
$=75.9$
Therefore, the mean heart beats per minute for these women is 75.9
5. In a retail market, fruit vendors were selling mangoes kept in packing boxes. These boxes contained varying number of mangoes. The following was the distribution of mangoes according to the number of boxes.

| Number of <br> mangoes | $50-52$ | $53-55$ | $56-58$ | $59-61$ | $62-64$ |
| :---: | :---: | :---: | :---: | :---: | :---: |

NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

| Number of <br> boxes | 15 | 110 | 135 | 115 | 25 |
| :---: | :---: | :---: | :---: | :---: | :---: |

Find the mean number of mangoes kept in a packing box. Which method of finding the mean did you choose?
Solution:
Since, the given data is not continuous so we add 0.5 to the upper limit and subtract 0.45 from the lower limit as the gap between two intervals are 1
Here, assumed mean (A) $=57$
Class size (h) $=3$
Here, the step deviation is used because the frequency values are big.

| Class Interval | Number of boxes ( $\mathrm{f}_{\mathrm{i}}$ ) | Mid-point ( $\mathrm{X}_{\mathrm{i}}$ ) | $\mathrm{d}_{\mathrm{i}}=\mathrm{x}_{\mathrm{i}}-\mathrm{A}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: | :---: |
| 49.5-52.5 | 15 | 51 | -6 | 90 |
| 52.5-55.5 | 110 | 54 | -3 | -330 |
| 55.5-58.5 | 135 | 57 = A | 0 | 0 |
| 58.5-61.5 | 115 | 60 | 3 | 345 |
| 61.5-64.5 | 25 | 63 | 6 | 150 |
|  | Sum $\mathrm{f}_{\mathrm{i}}=400$ |  |  | Sum $\mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}=75$ |

The formula to find out the Mean is:
Mean $=\overline{\mathrm{x}}=\mathrm{A}+\mathrm{h} \sum \mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}$
$=57+3(75 / 400)$
$=57+0.1875$
$=57.19$
Therefore, the mean number of mangoes kept in a packing box is 57.19
6. The table below shows the daily expenditure on food of 25 households in a locality. Find the mean daily expenditure on food by a suitable method.

| Daily <br> expenditure(in c) | $100-150$ | $150-200$ | $200-250$ | $250-300$ | $300-350$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of <br> households | 4 | 5 | 12 | 2 | 2 |

## Solution :

Find the midpoint of the given interval using the formula.
Midpoint $\left(\mathrm{x}_{\mathrm{i}}\right)=($ upper limit + lower limit $) / 2$
Let is assume the mean $(\mathrm{A})=225$
Class size (h) $=50$

Therefore, the mean daily expenditure on food is 211
7. To find out the concentration of $\mathrm{SO}_{2}$ in the air (in parts per million, i.e., ppm), the data was collected for 30 localities in a certain city and is presented below:

| Concentration of $\mathrm{SO}_{2}$ ( in ppm) | Frequency |
| :---: | :---: |
| 0.00-0.04 | 4 |
| 0.04-0.08 | 9 |
| 0.08-0.12 | 9 |
| 0.12-0.16 | 2 |
| 0.16-0.20 | 4 |
| 0.20-0.24 | 2 |

Find the mean concentration of $\mathrm{SO}_{2}$ in the air.
Solution:
To find out the mean, first find the midpoint of the given frequencies as follows:

| Concentration of $\mathrm{SO}_{2}($ in ppm $)$ | Frequency $\left(\mathrm{f}_{\mathrm{i}}\right)$ | Mid-point <br> $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $\mathrm{f}_{\mathrm{i} \mathrm{X}_{\mathrm{i}}}$ |
| :--- | :--- | :--- | :--- |
| $0.00-0.04$ | 4 | 0.02 | 0.08 |
| $0.04-0.08$ | 9 | 0.06 | 0.54 |
| $0.08-0.12$ | 9 | 0.10 | 0.90 |
| $0.12-0.16$ | 2 | 0.14 | 0.28 |
| $0.16-0.20$ | 4 | 0.18 | 0.72 |
| $0.20-0.24$ | 2 | 0.20 | 0.40 |
| Total | Sum $\mathrm{f}_{\mathrm{i}}=30$ |  | Sum $\left(\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}\right)=2.96$ |

The formula to find out the mean is
Mean $=\overline{\mathrm{x}}=\sum \mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}$
=2.96/30
$=0.099 \mathrm{ppm}$
Therefore, the mean concentration of $\mathrm{SO}_{2}$ in air is 0.099 ppm .
8. A class teacher has the following absentee record of 40 students of a class for the whole term. Find the mean number of days a student was absent.

NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

| Number of days | $0-6$ | $6-10$ | $10-14$ | $14-20$ | $20-28$ | $28-38$ | $38-40$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of students | 11 | 10 | 7 | 4 | 4 | 3 | 1 |

## Solution:

Find the midpoint of the given interval using the formula.
Midpoint $\left(\mathrm{x}_{\mathrm{i}}\right)=($ upper limit + lower limit $) / 2$

| Class interval | Frequency $\left(\mathrm{f}_{\mathrm{i}}\right)$ | Mid-point $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $\mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: |
| $0-6$ | 11 | 3 | 33 |
| $6-10$ | 10 | 8 | 80 |
| $10-14$ | 7 | 12 | 84 |
| $14-20$ | 4 | 17 | 68 |
| $20-28$ | 4 | 24 | 96 |
| $28-38$ | 3 | 33 | 99 |
| $38-40$ | 1 | 39 | 39 |
|  | $\operatorname{Sum~}_{\mathrm{i}}=40$ |  | $\operatorname{Sum~}_{\mathrm{i}}^{\mathrm{i}} \mathrm{X}=499$ |

The mean formula is, Mean
$=\overline{\mathrm{x}}=\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}$
$=499 / 40$
$=12.48$ days
Therefore, the mean number of days a student was absent $=12.48$.
9. The following table gives the literacy rate (in percentage) of 35 cities. Find the mean lite racy
rate.

| Literacy rate (in \%) | $45-55$ | $55-65$ | $65-75$ | $75-85$ | $85-98$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of cities | 3 | 10 | 11 | 8 | 3 |

Solution:
Find the midpoint of the given interval using the formula.
Midpoint $\left(\mathrm{x}_{\mathrm{i}}\right)=($ upper limit + lower limit $) / 2$
In this case, the value of mid-point $\left(\mathrm{x}_{\mathrm{i}}\right)$ is very large, so let us assume the mean value, $\mathrm{A}=70$ and class interval is $\mathrm{h}=10$.
So, $\mathrm{u}_{\mathrm{i}}=\left(\mathrm{x}_{\mathrm{i}}-\mathrm{A}\right) / \mathrm{h}=\mathrm{u}_{\mathrm{i}}=\left(\mathrm{x}_{\mathrm{i}}-70\right) / 10$
Substitute and find the values as follows:

| Class Interval | Frequency $\left(\mathrm{f}_{\mathrm{i}}\right)$ | $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $\mathrm{d}_{\mathrm{i}}=\mathrm{x}_{\mathrm{i}}-\mathrm{a}$ | $\mathrm{u}_{\mathrm{i}}=\mathrm{d}_{\mathrm{i}} / \mathrm{h}$ | $\mathrm{f}_{\mathrm{i} u_{i}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $45-55$ | 3 | 50 | -20 | -2 | -6 |

NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

| 55-65 | 10 | 60 | -10 | -1 | -10 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 65-75 | 11 | 70 | 0 | 0 | 0 |
| 75-85 | 8 | 80 | 10 | 1 | 8 |
| 85-95 | 3 | 90 | 20 | 2 | 6 |
|  | Sum $\mathrm{f}_{\mathrm{i}}=35$ |  |  |  | Sum $\mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}=-2$ |

So, Mean $=\overline{\mathrm{x}}=\mathrm{A}+\left(\sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}\right) \times \mathrm{h}$
$=70+(-2 / 35) \times 10$
$=69.42$
Therefore, the mean literacy part $=69.42$

## Exercise 14.2

1. The following table shows the ages of the patients admitted in a hospital during a year: Age

| (in years) | $\$-15$ | $15-25$ | 25 | -35 | $35-45$ | $45-55$ | $55-65$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
| Number of patients | 6 | 11 | 21 | 23 | 14 | 5 |  |

Find the mode and the mean of the data given above. Compare and interpret the two measures of central tendency.
Solution:
To find out the modal class, let us the consider the class interval with high frequency
Here, the greatest frequency $=23$, so themodal class $=35-45$,
$1=35$,
class width $(\mathrm{h})=10, \mathrm{f}_{\mathrm{m}}$
$=23$,
$\mathrm{f}_{1}=21$ and $\mathrm{f}_{2}=14$
The formula to find the mode is
Mode $=l+\left[\left(f_{m}-f_{l}\right) /\left(2 f_{m}-f_{l}-f_{2}\right)\right] \times h$
Substitute the values in the formula, we get
Mode $=35+[(23-21) /(46-21-14)] \times 10$
Mode $=35+(20 / 11)=35+1.8$
Mode $=36.8$ year

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

So the mode of the given data $=36.8$ year Calculation of Mean:

First find the midpoint using the formula, $\mathrm{x}_{\mathrm{i}}=($ upper limit + lower limit) $/ 2$

| Class Interval | Frequency |  |  |
| :---: | :---: | :--- | :---: |
|  | $\left(\mathrm{f}_{\mathrm{i}}\right)$ | Mid-point <br> $\left(\mathrm{x}_{\mathrm{i}}\right)$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| $5-15$ | 6 | 10 | 60 |
| $15-25$ | 11 | 20 | 220 |
| $25-35$ | 21 | 30 | 630 |
| $35-45$ | 23 | 40 | 920 |
| $45-55$ | 14 | 50 | 700 |
| $55-65$ | 5 | 60 | 300 |
|  | Sum $\mathrm{f}_{\mathrm{i}}=80$ |  | Sum $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=2830$ |

The mean formula is
$\operatorname{Mean}=\overline{\mathrm{x}}=\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}$
= 2830/80
$=35.37$ years
Therefore, the mean of the given data $=35.37$ years
2. The following data gives the information on the observed life times (in hours) of 225 electrical components:

| Lifetime (in hours) | $\mathbf{0 - 2 0}$ | $20-40$ | $\mathbf{4 0 - 6 0}$ | $\mathbf{6 0 - 8 0}$ | $\mathbf{8 0 - 1 0 0}$ | $\mathbf{1 0 0 - 1 2 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 10 | 35 | 52 | 61 | 38 | 29 |

## Determine the modal lifetimes of the components.

## Solution:

From the given data the modal class is $60-80$.
$1=60$,
The frequencies are:
$\mathrm{f}_{\mathrm{m}}=61, \mathrm{f}_{1}=52, \mathrm{f}_{2}=38$ and $\mathrm{h}=20$ The
formula to find the mode is
Mode $=l+\left[\left(f_{m}-f_{l}\right) /\left(2 f_{m}-f_{l}-f_{2}\right)\right] \times h$
Substitute the values in the formula, we get
Mode $=60+[(61-52) /(122-52-38)] \times 20$
Mode $=60+((9 \times 20) / 32)$
Mode $=60+(45 / 8)=60+5.625$
Therefore, modal lifetime of the components $=65.625$ hours.
3. The following data gives the distribution of total monthly hous ehold expenditure of 200 families of a village. Find the modal monthly expenditure of the families. Also, find the mean monthly expenditure:

| Expenditure | Number of families |
| :---: | :---: |
| $1000-1500$ | 24 |
| $1500-2000$ | 40 |
| $2000-2500$ | 33 |
| $2500-3000$ | 28 |
| $3000-3500$ | 30 |
| $3500-4000$ | 22 |
| $4000-4500$ | 16 |
| $4500-5000$ | 7 |

Solution:
Given datas:
Modal class $=1500-2000$,
$l=1500$, Frequencies:
$\mathrm{f}_{\mathrm{m}}=40 \mathrm{f}_{1}=24, \mathrm{f}_{2}=33$ and
h = 500 Mode
formula:
Mode $=l+\left[\left(f_{m}-f_{l}\right) /\left(2 f_{m}-f_{l}-f_{2}\right)\right] \times h$
Substitute the values in the formula, we get
Mode $=1500+[(40-24) /(80-24-33)] \times 500$
Mode $=1500+((16 \times 500) / 23)$
Mode $=1500+(8000 / 23)=1500+347.83$
Therefore, modal monthly expenditure of the families= Rupees 1847.83
Calculation for mean:
First find the midpoint using the formula, $\mathrm{x}_{\mathrm{i}}=($ upper limit + lower limit $) / 2$
Let us assume a mean, A be 2750

| Class Interval | fi | xi | $\mathrm{di}=\mathrm{xi}-\mathrm{a}$ | $\mathrm{ui}=\mathrm{di} / \mathrm{h}$ | fiui |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $1000-1500$ | 24 | 1250 | -1500 | -3 | -72 |
| $1500-2000$ | 40 | 1750 | -1000 | -2 | -80 |
| $2000-2500$ | 33 | 2250 | -500 | -1 | -33 |
| $2500-3000$ | 28 | 2750 | 0 | 0 | 0 |
| $3000-3500$ | 30 | 3250 | 500 | 1 | 30 |
| $3500-4000$ | 22 | 3750 | 1000 | 2 | 44 |
| $4000-4500$ | 16 | 4250 | 1500 | 3 | 48 |
| $4500-5000$ | 7 | 4750 | 2000 | 4 | 28 |
|  | $\mathrm{fi}=200$ |  |  |  | fiui $=-35$ |

The formula to calculate the mean,
Mean $=\bar{x}=\mathrm{a}+\left(\sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}\right) \times \mathrm{h}$

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

Substitute the values in the given formula
$=2750+(-35 / 200) \times 500$
$=2750-87.50$
$=2662.50$
So, the mean monthly expenditure of the families $=$ Rupees 2662.50
4. The following distribution gives the state-wise teacher-student ratio in higher secondary schools of India. Find the mode and me an of this data. Interpret the two measures

| No of Students per teacher | Number of states / U.T |
| :---: | :---: |
| $\mathbf{1 5 - 2 0}$ | $\mathbf{3}$ |
| $20-25$ | $\mathbf{8}$ |
| $25-30$ | $\mathbf{9}$ |
| $30-35$ | $\mathbf{1 0}$ |
| $35-40$ | 3 |
| $40-45$ | 0 |
| $45-50$ | 0 |
| $50-55$ | 2 |

## Solution:

Given data:
Modal class $=30-35$,
$l=30$,
Class width (h) $=5, \mathrm{f}_{\mathrm{m}}$
$=10, \mathrm{f}_{1}=9$ and $\mathrm{f}_{2}=3$
Mode Formula:
Mode $=l+\left[\left(f_{m}-f_{l}\right) /\left(2 f_{m}-f_{l}-f_{2}\right)\right] \times h$
Substitute the values in the given formula
Mode $=30+((10-9) /(20-9-3)) \times 5$
Mode $=30+(5 / 8)=30+0.625$
Mode $=30.625$
Therefore, the mode of the given data $=30.625$
Calculation of mean:
Find the midpoint using the formula, $\mathrm{x}_{\mathrm{i}}=($ upper limit + lower limit) $/ 2$

| Class Interval | Frequency <br> ( $\mathrm{f}_{\mathrm{i}}$ ) | Mid-point $\left(x_{i}\right)$ | $\mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: |
| 15-20 | 3 | 17.5 | 52.5 |
| 20-25 | 8 | 22.5 | 180.0 |

NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

| $25-30$ | 9 | 27.5 | 247.5 |
| :---: | :---: | :---: | :---: |
| $30-35$ | 10 | 32.5 | 325.0 |
| $35-40$ | 3 | 37.5 | 112.5 |
| $40-45$ | 0 | 42.5 | 0 |
| $45-50$ | 0 | 47.5 | 0 |
| $50-55$ | 2 | 52.5 | 105.5 |
|  | Sum $\mathrm{f}_{\mathrm{i}}=35$ |  | Sum $_{\mathrm{i}}^{\mathrm{i} \mathrm{x}_{\mathrm{i}}}=1022.5$ |

Mean $=\overline{\mathrm{x}}=\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}$
$=1022.5 / 35$
$=29.2$
Therefore, mean $=29.2$
5. The given distribution shows the number of runs scored by some top batsmen of the world in one - day international cricket matches.

| Run Scored | Number of Batsman |
| :---: | :---: |
| $3000-4000$ | 4 |
| $4000-5000$ | 18 |
| $5000-6000$ | 9 |
| $6000-7000$ | 7 |
| $7000-8000$ | 6 |
| $8000-9000$ | 3 |
| $9000-10000$ | 1 |
| $10000-11000$ | 1 |

Find the mode of the data.

Solution:
Given data:
Modal class $=4000-5000$,
$1=4000$,
class width $(\mathrm{h})=1000, \mathrm{f}_{\mathrm{m}}$
$=18, \mathrm{f}_{1}=4$ and $\mathrm{f}_{2}=9$
Mode Formula:
Mode $=l+\left[\left(f_{m}-f_{l}\right) /\left(2 f_{m}-f_{l}-f_{2}\right)\right] \times h$
Substitute the values
Mode $=4000+((18-4) /(36-4-9)) \times 1000$
Mode $=4000+(14000 / 23)=4000+608.695$
Mode $=4608.695$

Mode $=4608.7$ (approximately)
Thus, the mode of the given data is 4608.7 runs
6. A student noted the number of cars passing through a spot on a road for 100 periods each of 3 minutes and summarized it in the table given below. Find the mode of the data:

| Number of cars | Frequency |
| :---: | :---: |
| $0-10$ | 7 |
| $10-20$ | 14 |
| $20-30$ | 13 |
| $30-40$ | 12 |
| $40-50$ | 20 |
| $50-60$ | 11 |
| $60-70$ | 15 |
| $70-80$ | 8 |

## Solution:

Given Data:
Modal class $=40-50,1=40$,
Class width (h) $=10, \mathrm{f}_{\mathrm{m}}=20, \mathrm{f}_{1}=12$ and $\mathrm{f}_{2}=11$
Mode $=l+\left[\left(f_{m}-f_{l}\right) /\left(2 f_{m}-f_{l}-f_{2}\right)\right] \times h$
Substitute the values
Mode $=40+((20-12) /(40-12-11)) \times 10$
Mode $=40+(80 / 17)=40+4.7=44.7$
Thus, the mode of the given data is 44.7 cars

## Exercise 14.3

Page: 287

1. The following frequency distribution gives the monthly consumption of an electricity of 68 consumers in a locality. Find the median, mean and mode of the data and compare them.

| Monthly <br> consumption(in <br> units) | No. of <br> customers |
| :---: | :---: |
| $65-85$ | 4 |
| $85-105$ | 5 |
| $105-125$ | 13 |
| $125-145$ | 20 |
| $145-165$ | 14 |
| $165-185$ | 8 |
| $185-205$ |  |

Solution:
Find the cumulative frequency of the given data as follows:

| Class <br> Interval | Frequency | Cumulative <br> frequency |
| :---: | :---: | :---: |
| $65-85$ | 4 | 4 |
| $85-105$ | 5 | 9 |
| $105-125$ | 13 | 22 |
| $125-145$ | 20 | 42 |
| $145-165$ | 14 | 56 |
| $165-185$ | 8 | 64 |
| $185-205$ | 4 | 68 |
|  | $\mathrm{~N}=68$ |  |

From the table, it is observed that, $\mathrm{n}=68$ and hence $\mathrm{n} / 2=34$
Hence, the median class is $125-145$ with cumulative frequency $=42$
Where, $l=125, \mathrm{n}=68, \mathrm{C}_{\mathrm{f}}=22, \mathrm{f}=20, \mathrm{~h}=20$
Median is calculated as follows:

Median $=l+\left(\frac{\frac{\mathrm{n}}{2}-\mathrm{c}_{\mathrm{f}}}{\mathrm{f}}\right) \times \mathrm{h}$
$=125+((34-22) / 20) \times 20$
$=125+12=137$
Therefore median $=137$
To calculate the mode: Modal
class $=125-145, \mathrm{f}_{1}=20$,
$\mathrm{f}_{0}=13, \mathrm{f}_{2}=14 \& \mathrm{~h}=20 \mathrm{Mode}$
formula:
Mode $=l+\left[\left(f_{1}-f_{0}\right) /\left(2 f_{1}-f_{0}-f_{2}\right)\right] \times h$
Mode $=125+((20-13) /(40-13-14)) \times 20$
$=125+(140 / 13)$
$=125+10.77$
$=135.77$
Therefore, mode $=135.77$
Calculate the Mean:

| Class Interval | $\mathbf{f}_{\mathbf{i}}$ | $\mathbf{x}_{\mathbf{i}}$ | $\mathbf{d}_{\mathbf{i}}=\mathbf{x}_{\mathbf{i}}-\mathbf{a}$ | $\mathbf{u}_{\mathbf{i}}=\mathbf{d}_{\mathbf{i}} / \mathbf{h}$ | $\mathbf{f}_{\mathbf{i}} \mathbf{u}_{\mathbf{i}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $65-85$ | 4 | 75 | -60 | -3 | -12 |
| $85-105$ | 5 | 95 | -40 | -2 | -10 |
| $105-125$ | 13 | 115 | -20 | -1 | -13 |
| $125-145$ | 20 | 135 | 0 | 0 | 0 |
| $145-165$ | 14 | 155 | 20 | 1 | 14 |
| $165-185$ | 8 | 175 | 40 | 2 | 16 |
| $185-205$ | 4 | 195 | 60 | 3 | 12 |
|  | Sum $\mathbf{f}_{\mathbf{i}}=68$ |  |  |  | Sum $\mathbf{f}_{\mathbf{i}} \mathbf{u}_{\mathbf{i}}=7$ |

$\overline{\mathrm{x}}=\mathrm{a}+\mathrm{h} \sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}} / \sum \mathrm{f}_{\mathrm{i}}=135+20(7 / 68)$
Mean=137.05
In this case, mean, median and mode are more/less equal in this distribution.
2. If the median of a distribution given below is 28.5 then, find the value of an $x \& y$.

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

| Class Interval | Frequency |
| :---: | :---: |
| $0-10$ | 5 |
| $10-20$ | $\mathbf{x}$ |
| $20-30$ | 20 |
| $30-40$ | 15 |
| $40-50$ | $\mathbf{y}$ |
| $\mathbf{5 0 - 6 0}$ | 5 |
| Total | $\mathbf{6 0}$ |

Solution:
Given data, $n=60$
Median of the given data $=28.5$
Where, $\mathrm{n} / 2=30$
Median class is $20-30$ with a cumulative frequency $=25+x$
Lower limit of median class, $l=20$,
$\mathrm{C}_{\mathrm{f}}=5+\mathrm{x}, \mathrm{f}=$
$20 \& h=10$
Median $=l+\left(\frac{\frac{\mathrm{n}}{2}-\mathrm{c}_{\mathrm{f}}}{\mathrm{f}}\right) \times \mathrm{h}$
Substitute the values
$28.5=20+((30-5-\mathrm{x}) / 20) \times 10$
$8.5=(25-\mathrm{x}) / 2$
$17=25-\mathrm{x}$
Therefore, $\mathrm{x}=8$
Now, from cumulative frequency, we can identify the value of $x+y$ as follows:
Since,
$60=5+20+15+5+x+y$
Now, substitute the value of $x$, to find $y$
$60=5+20+15+5+8+y$
$y=60-53 y$
$=7$
Therefore, the value of $x=8$ and $y=7$
3. The Life ins urance agent found the following data for the distribution of ages of 100 policy holders. Calculate the median age, if policies are given only to the pers ons whose age is 18 years onwards but less than the 60 years.

| Age(in years) | Number of policy holder |  |  |
| :---: | :---: | :---: | :---: |
| Below 20 | 2 |  |  |
| Below 25 | 6 |  |  |
| Below 30 | 24 |  |  |
| Below 35 | 45 |  |  |
| Below 40 | 78 |  |  |
| Below 45 | $\mathbf{8 9}$ |  |  |
| Below 50 | $\mathbf{9 2}$ |  |  |
|  |  |  |  |

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

| Below 55 | 98 |
| :---: | :---: |
| Below 60 | 100 |

Solution:

| Class interval | Frequency | Cumulative frequency |
| :---: | :---: | :---: |
| $15-20$ | 2 | 2 |
| $20-25$ | 4 | 6 |
| $25-30$ | 18 | 24 |
| $30-35$ | 21 | 45 |
| $35-40$ | 33 | 78 |
| $40-45$ | 11 | 89 |
| $45-50$ | 3 | 92 |
| $50-55$ | 6 | 98 |
| $55-60$ | 2 | 100 |

Given data: $\mathrm{n}=100$ and $\mathrm{n} / 2=50$
Median class $=35-45$
Then, $l=35, \mathrm{c}_{\mathrm{f}}=45, \mathrm{f}=33 \& \mathrm{~h}=5$
Median $=l+\left(\frac{\frac{\mathrm{n}}{2}-\mathrm{c}_{\mathrm{f}}}{\mathrm{f}}\right) \times \mathrm{h}$
Median $=35+((50-45) / 33) \times 5$
$=35+(5 / 33) 5$
$=35.75$
Therefore, the median age $=35.75$ years.
4. The lengths of 40 leaves in a plant are measured correctly to the nearest millimeter, and the data obtained is represented as in the following table:

| Length(in mm) | Number of leaves |
| :---: | :---: |
| $118-126$ | 3 |
| $127-135$ | 5 |
| $136-144$ | 9 |
| $145-153$ | 12 |
| $154-162$ | 5 |
| $163-171$ | 4 |
| $172-180$ | 2 |

## Find the median length of leaves

Solution:
Since the data are not continuous reduce 0.5 in the lower limit and add 0.5 in the upper limit.

| Class Interval | Frequency | Cumulative frequency |
| :---: | :---: | :---: |
| $117.5-126.5$ | 3 | 3 |
| $126.5-135.5$ | 5 | 8 |

| $135.5-144.5$ | 9 | 17 |
| :---: | :---: | :---: |
| $144.5-153.5$ | 12 | 29 |
| $153.5-162.5$ | 5 | 34 |
| $162.5-171.5$ | 4 | 38 |
| $171.5-180.5$ | 2 | 40 |

So, the data obtained are:
$\mathrm{n}=40$ and $\mathrm{n} / 2=20$
Median class $=144.5-153.5$
then, $l=144.5, \mathrm{cf}=$
$17, f=12 \& h=9$

$$
\text { Median }=l+\left(\frac{\frac{\mathrm{n}}{2}-\mathrm{c}_{\mathrm{f}}}{\mathrm{f}}\right) \times \mathrm{h}
$$

Median $=144.5+((20-17) / 12) \times 9$
$=144.5+(9 / 4)$
$=146.75 \mathrm{~mm}$
Therefore, the median length of the leaves $=146.75 \mathrm{~mm}$.
5. The following table gives the distribution of a life time of 400 neon lamps.

|  |  |
| :---: | :---: |
| $1500-2000$ | 14 |
| $2000-2500$ | 56 |
| $2500-3000$ | 60 |
| $3000-3500$ | 86 |
| $3500-4000$ | 74 |
| $4000-4500$ | 62 |
| $4500-5000$ | 48 |

Find the median lifetime of a lamp.
Solution:

| Class Interval | Frequency | Cumulative |
| :---: | :---: | :---: |
| $1500-2000$ | 14 | 14 |
| $2000-2500$ | 56 | 70 |
| $2500-3000$ | 60 | 130 |
| $3000-3500$ | 86 | 216 |
| $3500-4000$ | 74 | 290 |
| $4000-4500$ | 62 | 352 |
| $4500-5000$ | 48 | 400 |

Data:
$\mathrm{n}=400 \& \mathrm{n} / 2=200$
Median class $=3000-3500$

## Lifetime (in hours) Number of lamps

Therefore, $l=3000, \mathrm{C}_{\mathrm{f}}=130$,
$\mathrm{f}=86$ \& $\mathrm{h}=500$

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

$$
\text { Median }=l+\left(\frac{\frac{\mathrm{n}}{2}-\mathrm{c}_{\mathrm{f}}}{\mathrm{f}}\right) \times \mathrm{h}
$$

Median $=3000+((200-130) / 86) \times 500$
$=3000+(35000 / 86)$
$=3000+406.97$
$=3406.97$
Therefore, the median life time of the lamps $=3406.97$ hours
6. In this 100 surnames were randomly picked up from a local telephone directory and the frequency distribution of the number of letters in English alphabets in the surnames was obtained as follows:

| Number of letters |  | $1-44-7$ | $7-10$ | $10-13$ | $13-16$ | $16-19$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of surnames | 6 | $\mathbf{3 0}$ | $\mathbf{4 0}$ | 16 | 4 | 4 |

Determine the number of median letters in the surnames. Find the number of mean letters in the surnames and also, find the size of modal in the surnames.

Solution:
To calculate median:

| Class Interval | Frequency | Cumulative Frequency |
| :---: | :---: | :---: |
| $1-4$ | 6 | 6 |
| $4-7$ | 30 | 36 |
| $7-10$ | 40 | 76 |
| $10-13$ | 16 | 92 |
| $13-16$ | 4 | 96 |
| $16-19$ | 4 | 100 |

Given:
$\mathrm{n}=100 \& \mathrm{n} / 2=50$
Median class $=7-10$
Therefore, $l=7, \mathrm{C}_{\mathrm{f}}=36, \mathrm{f}=40 \& \mathrm{~h}=3$
Median $=l+\left(\frac{\frac{n}{2}-\mathrm{c}_{\mathrm{f}}}{\mathrm{f}}\right) \times \mathrm{h}$
Median $=7+((50-36) / 40) \times 3$
Median $=7+42 / 40$
Median=8.05
Calculate the Mode:
Modal class =7-10,
Where, $l=7, \mathrm{f}_{1}=40, \mathrm{f}_{0}=30, \mathrm{f}_{2}=16 \& \mathrm{~h}=3$
Mode $=l+\left(\frac{f_{1}-f_{0}}{2 f_{1}-f_{0}-f_{2}}\right) \times \mathrm{h}$
Mode $=7+((40-30) /(2 \times 40-30-16)) \times 3$
$=7+(30 / 34)$
$=7.88$

Therefore mode $=7.88$

Calculate the Mean:

| Class <br> Interval | $\mathbf{f}_{\mathbf{i}}$ | $\mathbf{x}_{\mathbf{i}}$ | $\mathbf{f i x}_{\mathbf{i}}$ |
| :---: | :---: | :---: | :---: |
| $1-4$ | 6 | 2.5 | 15 |
| $4-7$ | 30 | 5.5 | 165 |
| $7-10$ | 40 | 8.5 | 340 |
| $10-13$ | 16 | 11.5 | 184 |
| $13-16$ | 4 | 14.5 | 51 |
| $16-19$ | 4 | 17.5 | 70 |
|  | Sum $_{\mathrm{i}}=100$ |  | Sum $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=825$ |

Mean $=\bar{x}=\sum f_{i} x_{i} / \sum f_{i}$
Mean $=825 / 100=8.25$
Therefore mean $=8.25$
7. The distributions of below give a weight of 30 students of a class. Find the median weight of a student.

| Weight(in kg) |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of <br> students | 2 | 3 | 8 | 6 | 6 | 3 | 2 |

Solution:

| Class <br> Interval | Frequency | Cumulative frequency |
| :---: | :---: | :---: |
| $40-45$ | 2 | 2 |
| $45-50$ | 3 | 5 |
| $50-55$ | 8 | 13 |
| $55-60$ | 6 | 19 |
| $60-65$ | 6 | 25 |
| $65-70$ | 3 | 28 |
| $70-75$ | 2 | 30 |

Given: $\mathrm{n}=30$ and $\mathrm{n} / 2=15$
Median class $=55-60$
40-45 45-50 50-55 55-60 60-65 65-70 70-75
$\mathrm{l}=55, \mathrm{C}_{\mathrm{f}}=13, \mathrm{f}=6 \& \mathrm{~h}=5$
Median $=l+\left(\frac{\frac{\mathrm{n}}{2}-\mathrm{c}_{\mathrm{f}}}{\mathrm{f}}\right) \times \mathrm{h}$
Median $=55+((15-13) / 6) \times 5$
Median=55 + $(10 / 6)=55+1.666$
Median $=56.67$

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

Therefore, the median weight of the students $=56.67$

## Exercise 14.4

Page: 293

1. The following distribution gives the daily income of 50 workers if a factory. Convert the distribution above to a less than type cumulative frequency distribution and draw its ogive.

| Daily income in Rupees | $100-120$ | $120-140$ | $140-160$ | $160-180$ | $180-200$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of workers | 12 | 14 | 8 | 6 | 10 |

Solution
Convert the given distribution table to a less than type cumulative frequency distribution, and we get

| Daily income | Frequency Cumulative Frequency |  |
| :---: | :---: | :---: |
| Less than 120 | 12 | 12 |
| Less than 140 | 14 | 26 |
| Less than 160 | 8 | 34 |
| Less than 180 | 6 | 40 |
| Less than 200 | 10 | 50 |

From the table plot the points corresponding to the ordered pairs such as (120, 12), (140, 26), (160, 34), (180, 40) and $(200,50)$ on graph paper and the plotted points are joined to get a smooth curve and the obtained curve is known as less than type ogive curve

2.During the medical check-up of 35 students of a class, their weights were recorded as follows:

| Weight in kg | Number of students |
| :---: | :---: |
| Less than 38 | 0 |
| Less than 40 | 3 |

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

| Less than 42 | 5 |
| :---: | :---: |
| Less than 44 | 9 |
| Less than 46 | 14 |
| Less than 48 | 28 |
| Less than 50 | 32 |
| Less than 52 | 35 |

Draw a less than type ogive for the given data. Hence obtain the me dian weight from the graph and verify the result by using the formula.

Solution:
From the given data, to represent the table in the form of graph, choose the upper limits of the class intervals are in x -axis and frequencies on y -axis by choosing the convenient scale. Now plot the points corresponding to the ordered pairs given by $(38,0),(40,3),(42,5),(44,9),(46,14),(48,28),(50,32)$ and $(52,35)$ on a graph paper an join them to get a smooth curve. The curve obtained is known as less than type ogive.

Locate the point 17.5 on the $y$-axis and draw a line parallel to the $x$-axis cutting the curve at a point. From the point, draw a perpendicular line to the $x$-axis. The intersection point perpendicular to $x$-axis is the median of the given data. Now, to find the mode by making a table.

| Class interval | Number of students(Frequency) | Cumulative Frequency |
| :---: | :---: | :---: |
| Less than 38 | 0 | 0 |
| Less than 40 | $3-0=3$ | 3 |
| Less than 42 | $5-3=2$ | 8 |
| Less than 44 | $9-5=4$ | 9 |
| Less than 46 | $14-9=5$ | 14 |
| Less than 48 | $28-14=14$ | 28 |
| Less than 50 | $32-28=4$ | 32 |
| Less than 52 | $35-22=3$ | 35 |

The class $46-48$ has the maximum frequency, therefore, this is modal class Here, $l=46, \mathrm{~h}=2, \mathrm{f}_{1}=14, \mathrm{f}_{0}=5$ and $\mathrm{f}_{2}=4$ The mode formula is given as:
Now, Mode =

## NCERT Solution for Class 10 Maths Chapter 14 _ Statistics

$$
\text { Mode }=l+\left(\frac{f_{1}-f_{0}}{2 f_{1}-f_{0}-f_{2}}\right) \times \mathrm{h}
$$

$=46+0.95=46.95$
Thus, mode is verified.
3. The following tables gives production yield per hectare of wheat of $\mathbf{1 0 0}$ farms of a village.

| Production Yield | $50-55$ | $55-60$ | $60-65$ | $65-70$ | $70-75$ | $75-80$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of farms | 2 | 8 | 12 | 24 | 38 | 16 |

Change the distribution to a more than type distribution and draw its ogive.
Solution:
Converting the given distribution to a more than type distribution, we get

| Production Yield $(\mathrm{kg} / \mathrm{ha})$ | Number of farms |
| :--- | :---: |
| More than or equal to 50 | 100 |
| More than or equal to 55 | $100-2=98$ |
| More than or equal to 60 | $98-8=90$ |
| More than or equal to 65 | $90-12=78$ |
| More than or equal to 70 | $78-24=54$ |
| More than or equal to 75 | $54-38=16$ |

From the table obtained draw the ogive by plotting the corresponding points where the upper limits in x -axis and the frequencies obtained in the $y$-axis are $(50,100),(55,98),(60,90),(65,78),(70,54)$ and $(75,16)$ on this graph paper. The graph obtained is known as more than type ogive curve.
